Welcome

The power of experience

It gives me great pleasure to welcome you to the EuroEyes Eye Clinics in China. The launch of EuroEyes China marks the start of an exciting new chapter for our company. It also represents the fulfilment of a long-term dream I have had to expand EuroEyes beyond Europe and in doing so bring the highest quality of German laser eye surgery to the people of China.

Laser Eye Surgery is my life's passion. The motivation to improve people's vision has defined my career.

Since qualifying as an ophthalmologist in 1986 I have challenged myself continually to seek new innovations in laser eye surgery that will raise the standards of my profession. I have been fortunate to work with many of the global leaders in my field who have provided me with the inspiration to develop EuroEyes into the largest international brand of laser eye clinics in Europe.

EuroEyes' German heritage is important as it defines our total commitment to quality, technology and excellence.

I believe in always doing the best I possibly can and this spirit is integral to EuroEyes. Together with my colleagues, we challenge ourselves to exceed the highest international quality and safety standards, to employ the latest advanced technology and to ensure that we provide absolute excellence in our results.

Our surgeons have successfully completed over 300,000 eye surgeries. EuroEyes is a brand that you can trust and believe in.

We enter China with excitement in our hearts and a commitment to make a future without glasses and contact lenses a reality.

Dr. med. Jørn S. Jørgensen

Medical Director & Founder of the EuroEyes Clinical Group

Introducing: German doctors and German quality in Jin Mao

EuroEyes is proud to have some of the world's leading eye doctors. Our team of highly experienced surgeons from Germany combine uncompromising quality, safety and expertise to give you the best treatment available.

GERMAN DOCTORS
Listed among the best
surgeons in Europe

PROVEN QUALITY
20 years of experience,
300,000 operations

INNOVATION
Worldwide first with
state of the art technology

Our solution is **your key** to unlock the door of life

If you are nearsighted

Nearsightedness (myopia) is a refractive error that makes close-up objects clear, while distant objects are blurred. Myopia is one of the most common eye disorders affecting up to 70% of Chinese people.

Our solution for you is **eeLASIK™**.

[Read more on page 10.](#)

If you are high nearsighted

Nearsightedness (myopia) of more than -10 diopters appears in many people in China and needs a special treatment.

Our solution for you is **ICL** (Intraocular Contact Lens) implantation.

[Read more on page 12.](#)

If you are 45+ and need progressive or reading glasses

For people who are over 45 years of age and have trouble seeing far-away and close-by objects without glasses.

Our solution for you is the **eePreLex** or Presbyopic Refractive Lens Exchange.

[Read more on page 14.](#)

If you have a cataract

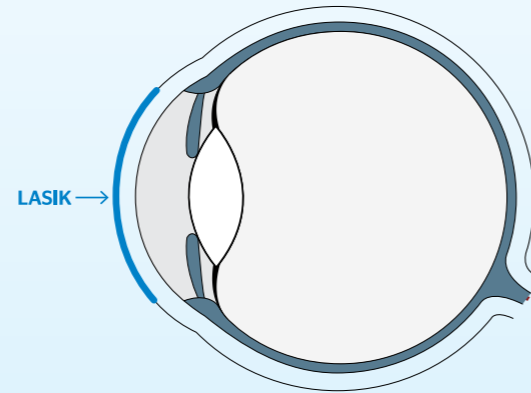

A cataract is a clouding of the lens and is the leading cause of vision loss in people over the age of 65.

Our solution for you is the **eeCataract Extraction**.

[Read more on page 16.](#)

eeLASIK™ – customised treatment for myopia and astigmatism

Every eye is unique and deserves a unique treatment. eeLASIK™ is the state of the art technology for tailored laser eye vision correction.

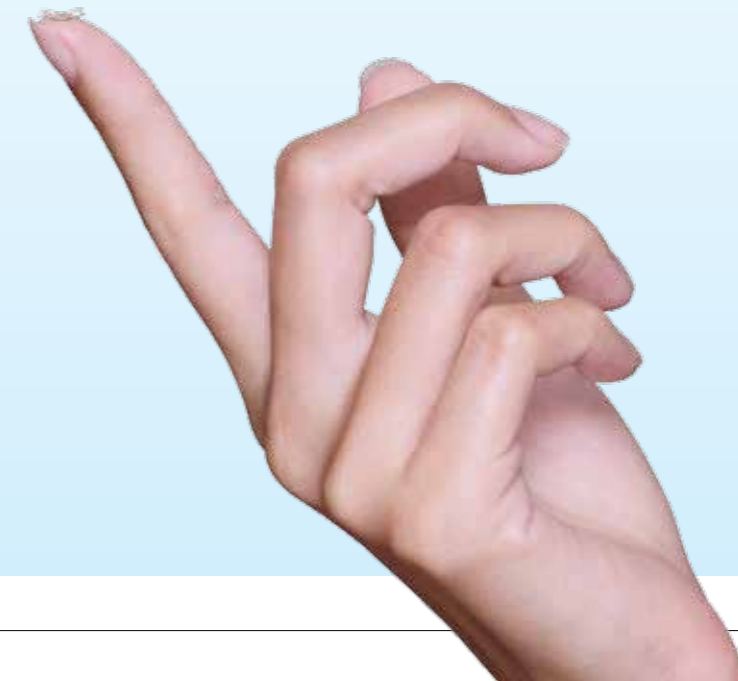

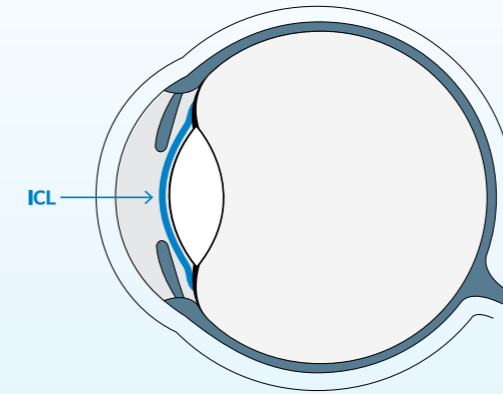

1 Wavefront analysis
To prepare your eyes for eeLASIK™ we use the wavefront technology which enables us to measure the refractive power of the eye at more than 200 different spots. It produces a “map of the eye”, which contains the precise refractive power for every measured spot. It is often called “a fingerprint of your vision”. EuroEyes applies this technology to the laser vision correction thereby being able to create a vision better than when using glasses or contact lenses.

2 Femtosecond laser
EuroEyes was among the first worldwide to introduce the femtosecond laser for flap creation prior to LASIK to correct nearsightedness and farsightedness with or without astigmatism. The femtosecond LASIK has become the Gold Standard at EuroEyes.

3 Excimer laser
In the last step of eeLASIK™, the excimer laser uses the scanned image from the wavefront examination to precisely sculpt the corneal surface and change its contour, thereby creating a vision better than glasses or contact lenses.

ICLs for high myopic eyes. Your vision is our profession

Nearsightedness (myopia) of more than -10 diopters appears in many people in China. To correct this they need a special treatment.

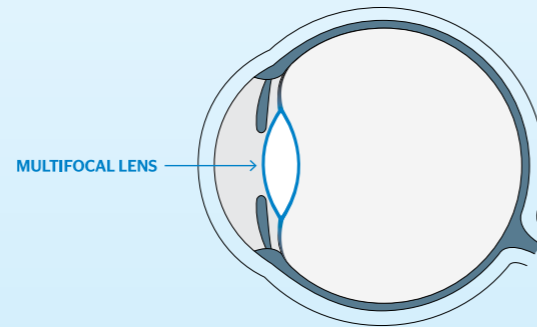

1 ICL implants are the treatment of choice for patients with high myopia. The lens is implanted into the eye where it stays permanently between the iris and the patient's lens.

2 The vision normally improves on the same day as the ICL procedure, and recovery is usually very fast.

PreLEX – multifocal lens for **presbyopia treatment**

Presbyopia usually becomes apparent between the ages of 45 and 50: small sized text becomes increasingly difficult to read. Your arms may not seem long enough to read a newspaper or book. Eventually, reading glasses must be used. People who are near- or farsighted are also affected by this condition, and often this results in the need for several glasses, or bifocals.

- 1 PreLEX stands for Presbyopic Refractive Lens Exchange. It is the procedure of choice for patients over 45 who have trouble seeing distant and near objects without the use of glasses or contact lenses.
- 2 PreLEX removes the natural lens, that has not yet become a cataract and replaces it with a multifocal lens implant allowing the patient to see far, intermediate and near clearly. Both eyes need PreLEX treatment before the full benefits are seen.

*Your opportunity
for a life without glasses*

eeCataract Extraction

A cataract is a clouding of the lens and is the leading cause of vision loss in people over the age of 65. The only treatment option is a cataract extraction.

1 The treatment of cataracts is performed as an outpatient surgical procedure, involving the replacement of the cloudy, natural lens with a clear, artificial lens. The operation is performed under local topical anaesthesia.

2 EuroEyes has unique and unparalleled experience in cataract surgery. Dr. Jørgensen was one of the first eye surgeons in Germany to perform the revolutionary "small-incision" (phakoemulsification) technique for cataract surgery.

Laser Cataract removal in Germany

With the new LenSx® femtosecond laser, no manual cutting with a scalpel is necessary. This new laser technology performs many of the steps that the surgeon previously performed. This has the significant advantage of increasing the safety and precision of the incisions, as well as assuring a perfectly centered artificial lens at the end of surgery. All of this results in an optimal visual outcome.

EuroEyes.

20 years of experience
– longest proven experience

EuroEyes one of the **first** to introduce the femtosecond laser in refractive surgery

EuroEyes one of the **first** world-wide to perform laser lens removal in cataract surgery

EuroEyes **first** worldwide to introduce the only certification standards for laser eye treatments: TÜV
